Application No. 10/699,882 Amdt. dated August 22, 2005 Reply to Office Action of May 9, 2005

4

## Amendments to the Claims:

## 1. to 28. (Cancelled)

29. (Currently amended) A method of immunizing a host, which comprises:

administering to the host an attenuated bacteria harbouring a vector comprising a nucleic acid molecule encoding at least one immunoprotection-inducing Chlamydia protein or a fragment thereof which generates a Chlamydia protein specific immune response and a promoter operatively coupled to said nucleic acid molecule for expression of said Chlamydia protein or fragment thereof by cells in cells of the host but not by said in said attenuated bacteria.

30. (Original) The method of claim 25 wherein said Immunoprotection Inducing Chlamydia protein or fragment thereof is a major outer membrane protein (MOMP) of a strain of Chlamydia.

31. (Original) The method of claim 30 wherein sald strain of Chlamydia is a strain of Chlamydia pneumoniae.

32. (Original) The method of claim 36 wherein said strain of Chlamydia is a strain of Chlamydia trachomatis.

33. (Cancelled)

34. (Previously presented) The method of claim 29 wherein said promoter is a cytomegalovirus promoter.

35. (Previously presented) The method of claim 29 wherein said vector is a plasmid vector.

36. (Previously presented) The method of claim 35 wherein sald plasmid vector is pcDNA3/MOMP as seen in Figure 5.

Tolk of the 3

Application No. 10/699,882 Amdt. dated August 22, 2005 Reply to Office Action of May 9, 2005

(Original) The method of claim 29 wherein said attenuated bacteria is an attenuated strain of Salmonella.

(Original) The method of claim of wherein said attenuated strain of Salmonella is an attenuated strain of Salmonella typhimunum.

39. (Original) The method of claim 29 wherein said administration is effected to mucosal surfaces.

(Original) The method of claim 39 wherein said administration is effected by intranasal administration.
